## Stoney Girl Gardens

### Welcome

My name is Jenifer Valley. I have been a card holder in the Oregon Medical Marijuana Program since 1999. I won First Place in the Oregon Medical Cannabis Awards in November of 2002 and again in 2003. I have not always been growing and have had no formal education in horticulture. When I started I knew very little about the subject. Reading books was just confusing and good information was hard to find. The local grow shops offer every miracle your pocket book can afford, and are more than happy to recommend the most expensive array of combinations of snake oils found.

I started growing in a small apartment closet. I cried when I got my first harvest, it was so awful. Then one day a friend and formerly successful grower showed me an easy way to grow any kind of species without the costs, pains and confusion. I have been so successful that I wanted to share it with other people in need. YES it really is easy to grow if you follow my instructions exactly. The instructions are EASY and I guarantee that you will see better medicine. So go throw out all that Miracle Grow and chemical crap and give this 100 % Organic method a shot.

Spreading the Love of Growing,

Jenifer

### Growing the Stoney Girl Way

First, it's easy. Results are guaranteed regardless of the species. Organic gardening brings out the true taste of the plant. Organics are taking over in all competitions including the world famous Cannabis Cup in Amsterdam. Our recipe is time tested and taken from professionals with great experience. We have been honored to apprentice with some of the world's best and learn the secrets. Easy is the word. Stop worrying about PH, Microbiology, testing and being a degree Horticulturalist. Our mix starts with sterile, professional products that take the mystery and cost out of gardening. Grow like a Pro. Just Plant, Water and Go. Why do we share? We remember trying to start and the trials and tribulations with success and failures, mostly the latter. We found this easy way and want everyone to be as successful as we have been. So get out there and get gardening. If you really want to be efficient, check out our Perpetual Cycle plan and advanced breeding classes.

## Who We Are

Founded in 1999 by Jenifer Valley, a 4<sup>th</sup> stage cancer patient who is an avid activist and Medical Marijuana card holder, we are a philanthropic group. Our master breeder has been working in the field of genetic engineering since 1969.

Stoney Girl Gardens is a private group of patients and caregivers inspired by patients and dedicated to everyone in the Medical Marijuana Program. We believe in sharing our success and experience with qualified individuals. If you follow our advice exactly and use our strains we guarantee your results to be award winning.

Stoney Girl Gardens is a World Class Breeder and Award Winner. Stoney Girl Gardens is continually creating true breeding strains such as Pit Bull, Crippled Rhino, Berkeley Blues, Oregon Pinot Noir, and Sugar Plum. Our Exclusive Signature Series breeds have twice won first place in the Oregon Medical Cannabis Awards, and have been featured on full page articles in High Times. We are featured in the Big Book of Buds 4 due to arrive in 2010. Our girls have modeled with some of the world's top clothing designers. We have been front page headlines in many newspapers. Our garden has been visited, viewed, photographed and qualified by many well known horticulturalists such as Ed Rosenthal. Our catalogs are featured in the famous Amsterdam coffee shops, and our strains sought after by professional seed companies. They are only available however to qualified Medical Marijuana candidates. This is a true North West Tradition.

We have no organization to join, or nothing for sale. We focus exclusively on our own projects and share our accomplishments. We offer free grow classes to qualified organizations. We support the Medical Marijuana Program and work well within the requirements. We are open to support any qualified organization. We already support many. We want to know about yours.

We don't just grow seeds, we produce true breeding strains. Stoney Girl Gardens has the largest seed bank reserves in the US. We are the only true breeder in the US and recognized worldwide by our breeding associates and top experts in the field. Stoney Girl Gardens has been commissioned to create or otherwise produce and preserve exotic and special strains for certain qualified clients. Some of these clients look to SGG to reproduce and preserve species that otherwise would become extinct due to lack of true breeding seed stock and methods. All of our seed stock is of the finest breeding quality, each seed specifically inspected and controlled for heredity and quality of genetics. This brings you the consistency of getting what you expect, with no surprises. It takes about 1 to 3 years for us to perfect a single true breeding strain under our program.

Stoney Girl Gardens is an accredited and acclaimed world class breeder. While others simply produce Hybrids, we only produce the finest True Breeder Quality seeds, acclimated for the North West.

## One Size Does Not Fit All - Marijuana as Medicine

One size does not fit all. There are many strains and many differing effects of Medical Marijuana. As well, MMJ treats more conditions than any other drug available. MMJ treats everything from headache to sleep deprivation, from MS to CF to CP; from pain to stage 4 cancers.

Stoney Girl Gardens works with a third party group M-Scale to classify and clarify Medical Marijuana. The M-Scale is simple. It has a scale of numbers from 1-9; 1 meaning amphetamine (Upper) and 9 meaning opiate (Downer). A number 5 is neutral. You can now know if your medicine is a morning or evening effect. The scale also includes a periodic table of elements or effects such as M for Munchies, L for Long Duration of 3-4 hours and S for Short Duration of 0-1 hours.

This allows the doctor to tell his patient that they need a 3ML meaning something on the upper side that creates munchies and lasts for 3-4 hours. The patient can take this advice to the pharmacy and the pharmacy can determine stock. This removes the need for knowing names like Purple Urkle or Umma Gooma.

Look for the M-Scale ratings on each of our strains. The rating is located on the cover photo and the Official Certificate is at the end of each strain section. There is also a handy guide at the end to help you select what is right for you.

## Crippled Rhino

### Strain Information

|                    |   |
|--------------------|---|
| Strain Name        | Crippled Rhino  |
| Description        | As Featured in Ed Rosenthal's Marijuana Growers Handbook, High Times, Skunk |
| Days of Flowering: | 42  |
| Category:          | 80% Indica, 20% Sativa  |
| Yield:             | 5-9 ounces indoor, 5-9 lbs outdoor  |
| Potency (THC):     | 28%   |
| Mature Height:     | 7 feet indoor, 9 feet outdoor   |
| Type of high:      | Total Couch Lock. One hit wonder.   |
| SMELL/TASTE:       | Floral, Light, Jasmine Thai   |
| Plant Type:        | Tall, Medium sized tree   |
| Indoor/outdoor:    | Grows great indoors and out.  |
| Mother:            | White Rhino with crippler   |
| Father:            | Pure Thai Father  |

### Back ground Information:

This breed is a love story. This was our first breeding project. When I started, way back at the beginning in 1999, we had access to White Rhino seeds from a fellow breeder which we wanted to breed across our Crippler seed. Crippler is the grandfather of Big Bud and a very productive chocolate Thai that was acclimated by some boarders in Seattle in the late 70's. The true strain was lost as far as we knew it and we had one seed that we were able to sprout. Unfortunately this crippler seed was a male. We started ten White Rhino seeds. We selected a really outstanding one from those ten. We had one Crippler seed that was a male that we collected the pollen from. The very first time that I kissed my lover was when we put the Crippler pollen on the White Rhino female. We only got one seed, but she is amazing. She is deeply flowery and strongly perfumed. Our object was to fuse the deep earthy and exotic taste of the Crippler with the speed and size of White Rhino.

Crippler is an outstanding "couch" medicine but takes an extreme amount of time to finish. Crippler is a Thai Big Bud origin with very dense fruit. White Rhino is fast, large and has "popcorn" like or airy, but large fruit. Together they have outperformed our expectations.

## Stoney Girl Gardens

Crippled Rhino was our first cross, and it's a love story. The day after my husband told me he liked me for the first time, as we were putting the Crippler pollen on the special White Rhino we had picked for breeding, we shared our first kiss. It was magic. We only got one seed, but it was amazing: a 7 foot tall tower with dense colas as long as my arm. We've been honeymooning ever since that kiss. We wanted the name to reflect both parents.

### Medical Information

An evening medicine that is great for sleep and heavy pain. Effects will last 4-5 hours. It is very good for breaking up mucus and cleaning out lungs. Caution: May Make You Cough. Very Light flavor with very strong effects. Excellent for relaxing, gaining an appetite, removing pain, and nausea. Great for use in the evening time to relax. This is the Mother of Crippit.

## Berkeley

### Strain Information

|                    |   |
|--------------------|---|
| Strain Name:       | Berkeley  |
| Description:       | Upper, alert, motivating, strong, morning tea, morning pain reliever and great for chemo. This is our flagship for breeding to create or shorten the grow cycle into our thirty- some, day strains. Mix this with any long term growing strain and you will cut the time in half to finish your new creation. |
| Category:          | Sativa (100%)   |
| Days of Flowering: | 28  |
| Yield:             | 5-6 ounces indoor, 6-9 pounds outdoor   |
| Potency (THC):     | 28%   |
| Mature Height:     | 3-6 ft Indoor /14 ft Outdoor  |
| Plant Type:        | Bush with thick canopy on all sides   |
| Indoor/Outdoor:    | Yes/Yes   |
| High Type:         | Upper, Motivational, Strong. Great for Breakfast  |
| Taste/Smell:       | Mild skunk, with a big bite under taste. Very neutral and pleasant.   |
| Mother:            | Land Race, South America  |
| Father:            | Land Race, South America  |

### Back Ground Information:

Berkeley is originally from an individual with cancer who worked on a science project at Berkeley University, or so the legend goes. She is the fastest finisher I have and she produces incredible amounts of sugar. Outside she will get 14 feet tall with an eight foot diameter. Even the fan leaves and stems grow crystals. The high is a speedy, up type high. Don't try to take a nap on this, and expect anxiety attacks if you're hyper. Very good early but comes with a "warning" label for its rib breaking expansion characteristics. With this breed you can really get some stuff done. We use this strain to speed up slow, long varieties in our breeding program. It finishes in a whopping 28 days of bloom cycle. It is a South American sativa based land race plant. This comes from the high mountains down by the south pole (Argentina) where the summers are short. This plant produces above average trichomes and is very medicinal while being extremely fast. It was created (acclimated, stabilized and produced for propagation) by a cancer patient for himself. We carry on his flag and thank him for his work. He is one of many whom have made a difference for us all.

**SGG-Berkeley Blues**

## Berkeley Blues bigger, faster blue berry

|                    |   |
|--------------------|---|
| Strain Name:       | Berkeley Blues  |
| Description:       | Berkeley Blues is a cross between Berkeley and pure traditional Blueberry from DJ Shorts. It was everything I could have hoped for. Deep blue stems no matter where you grow this beauty. She is very much faster than Blueberry with a lot more sugar. The traditional Blueberry flavor comes through, however and the stone is outstanding. Over 5lbs outdoors, this breed stores well for long periods. A favorite with medical patients. Very bushy plant with fewer than most leaves. Berkeley Blues is a fast finisher. Finishes in just over 35 days of bloom. |
| Category:          | 20% Indica, 80% Sativa  |
| Days of Flowering: | 30  |
| Yield:             | 3-5 ounces indoor, 6-9 pounds outdoor   |
| Potency (THC):     | 28%   |
| Mature Height:     | 3-6 ft Indoor, 6-10 ft outdoor  |
| Plant Type:        | Tall Bush with thick canopy on all sides  |
| Indoor/Outdoor:    | Yes/Yes   |
| High Type:         | Intense and satisfying. Great for daytime use   |
| Taste/Smell:       | Blueberry muffins   |
| Mother:            | Berkeley  |
| Father:            | DJ Shorts Blueberry Circa 1998  |

### **Background Information:**

This is one that turned Ed Rosenthal's head and one of his favorites. Tastes like Fresh Blue Berry Muffins right out of the oven. Berkeley Blues is very potent and effective, stores well, and grows great indoor and outdoor.

## Cripit (Crippled Pit) 2008

### Strain Information

Strain Name:

Cripit

Description:

Chocolate Thai anyone? We crossed the Pit with Crippled Rhino and got that old fashioned Buddha Stick flavor and punch. It's extremely potent with that blast from the past flavor. You won't want to miss this ones, essence of lilacs and hash. Cripit is very Strong, intense, smooth, and sweet, has branches like a Christmas trees, and grows tall. It also turns a lovely purple when it gets chilly. The leaves are very large and thick and wide with crystals down the fan leaves.

Category:

Sativa 15% / Indica 85%

Days of Flowering:

35

Yield:

5- 9 ounces indoor, 8 pounds outdoor

Potency (THC):

32%

Mature Height:

6 ft indoor, 16 ft outdoor

Type of high:

It's very strong, it takes effect immediately and it lasts for hours. Euphoric, dreamy, very cheerful, and happy high.

Plant Type:

Christmas tree, Bushy

Indoor/Outdoor:

Crippit grows great indoors and out.

Taste/smell:

Buddha stick flavor, Crippit is outstandingly balanced, with a Thai top note and a Hawaiian base flavor that blend with a subtle floral.

Mother:

White Rhino Female – Cannabis Cup Winner

Father:

Pit Bull, Oregon 2004

### Background Information:

We crossed our Pit Bull on Crippled Rhino and got Crippit. This heavy indica has a sweet exotic flavor and giant leaves with big chunky buds. It is a traditional "umbrella" plant. Even a little chill will turn her purple. She is delicious fresh, but curing really brings out the exotic flavor of the Chocolate Thai in her background. It's a great party bud. This is actually one of my all-around favorites.

As Featured in The Big Book of Buds Vol. 4 (2010)

The thing that stood out the most about this variety is that it is a bit of a throwback in that it brought out the best of the Highland Thai genes from the Crippler, while still keeping the speed to harvest that we require. Thai in 6 weeks instead of 12

## Stoney Girl Gardens

Works well for my nausea and other symptoms.

Crossing the Crippled Rhino with Pit Bull allowed us to take her outside. Crippled Rhino is more suited as an indoor Chocolate Thai strain, but the Cripit does just fine outdoors. We put it in bloom at about 4 to 4 1/2 feet tall and it comes out between 6-7 feet tall. Buds are big and seem loose, but are really quite dense.

This variety throws two primary colas and many secondary colas that are not quite as big.

Cripit was released to the community in 2008. It has not yet been placed in contests.

The image shows a detailed label for the 2010 M-SCALE Cripit strain from Stoney Girl Gardens. The label features a central shield-shaped emblem with the 'M' logo and the strain name 'Cripit'. To the left, it lists the intended audience and strain intentions. To the right, it includes the M-SCALE logo and a circular emblem with a caduceus. At the bottom right, there are four colored boxes representing effects: Body Effects (Bx), Extended Duration (ED), Euphoric (E), and Happy (H). A signature for Troy D. Morris is also present.

## Stoney Girl Gardens

### **Medical Information**

Cripit is great for nausea; we definitely recommend this one to use after chemo. It's a happy high so if you suffer from depression it is a good candidate to use. Cripit is not really a morning tea; it's more of a night time use but helps great as a pain reliever.

## Haze Plum everybody's favorite

|                    |  |
|--------------------|--|
| Strain Name:       | Haze Plum  |
| Description:       | This is everybody's Favorite. Haze plum is a Sativa dominant. She has a narrow, tall shape to her and dark purple stripes on her stems. Her leaves are large and have very wide fingers indicating some indica parentage. Her flavor is intense and tropical, very sweet. I believe that she was bred by the dead guy I got her from. I do know that the Hawaiian Haze is a pure sativa. |
| Category:          | Sativa   |
| Days of Flowering: | 40   |
| Yield:             | 3-5 ounces indoor, 5 pounds outdoor  |
| Potency (THC):     | 28%  |
| Mature Height:     | 4-6 feet indoor, 10 feet outdoor   |
| Type of high:      | Satisfying   |
| Plant type:        | Tall narrow silhouette that is almost spindly with long spiraling buds.  |
| Indoor/Outdoor:    | She performs outstandingly in all conditions.  |
| Taste/Smell:       | Her flavor is intense, tropical, and very sweet  |
| Mother:            | Unknown  |
| Father:            | Unknown  |

### **Background Information:**

I got Hawaiian Haze Plum along with a large collection of other seeds from a friend whose brother-in-law had unexpectedly died in a hang glider crash.

One late evening I got a call from an old high school buddy. His sister had just called him in a frantic voice demanding he come over. When he arrived at his sister's house she directed him to his brother-in-law's private shop in the back acreage. There they found a very sophisticated grow operation and a well secured seed bank along with extensive records. Seems this guy had been breeding for quite some time.

Making the story short we assisted our friend in reconstructing the operation for his med patients. Yes, he went home and build a huge building dedicated to growing for patients. Of course we got the seeds. We are often blessed with gifts from those who know we will get them out.

## Stoney Girl Gardens

Tonight we are starting some Haze Plum Purple Passion from the same guy. He is one of three we will feature on our Wall of Fame coming soon. These are three guys we all need to say thank you to.

Haze Plum is a long time favorite. It is easy to grow, good to smoke and a great candidate for breeding. I have tested the Haze Plum indoors, outdoors, and in hydro and she performs outstandingly in all conditions. I believe that she was bred by the friend I got her from. Because we did not create her we do not claim her; however we are the gatekeeper or responsible ones who have been destined to carry on his work. I do know that the Hawaiian Haze is a pure sativa.

## P-91

Strain Name: P-91  
Description:

If you like G-13 then you will love this. P-91 is downer, it's a morphine replacement. It's recommended as a substitute for patients that use morphine or heavy downers. It has a pissy, skunky flavor. Effective medicine and produces well. It has pure pink hairs when grown outside and very tight buds. Medium to large fast cloning, fast growing.  
Great for severe pain.

Category: Mix  
Days of Flowering: 38-42  
Yield: 5-7 ounces indoors, 5 pounds outdoor  
Potency (THC): 28%  
Mature Height: 4-6 feet indoor, 6-9 feet outdoor  
Type of high: Heavy. Solid punch right from the start.  
Taste/Smell: Grapefruit and strong skunky  
Plant Type: Huge leafs and dense buds  
Indoor/Outdoor: Grows well indoors and out Pure pink hairs outdoors.  
Mother: UCSD  
Father: UCSD

Background Information: We traded some Berkeley Blues seeds to the University Professor who created this genetics. We were told that this was the government's latest G-13. This came from a program at a Southern California University that supposedly did not "exist". BTW he (the professor) really liked the Berkeley Blues.  
P-91 is responsible for creating Pit Bull, Hogs Breath and many others. I know this because I was fortunate to meet the family who originally created this strain later on. It was created in Poway in 1991. The DEA had captured this strain and claimed it. The last strain that I knew the fam had worked on was called Talliban.

2010

## Sugar Plum

1st Place, 2003 Oregon Medical Cannabis Award Winner.

Strain Name:

Sugar Plum

Description:

High Times Pick of the Crop

Sugar Plum is a cross between Berkeley Blues and a Hawaiian Haze Plum. The Haze Plum is a deep tropical purple flavor with a very strong stone and a tall narrow silhouette that is almost spindly with long spiraling buds. Sugar Plum is a medium size bush with very deep green, large leaves. The flavor is complex the deep tropical flavor of the Haze Plum comes through first with the earthy Berkeley Blues bottom note clearly coming through the finish. Always throws several large, dense colas. Stores well and finishes fast.

Category:

10% Indica, 90% Sativa

Days of Flowering:

35

Yield:

3-5 ounces indoors, Outdoors grows into a 9 foot sphere that yields around 2-3 pounds

Potency (THC):

28%

Mature Height:

3-4 feet indoor, 9-10 feet outdoor

Type of high:

Smooth but very strong. Good for many conditions.

Plant Type:

Bushy, round plant with densely tropical buds

Indoor/Outdoor:

Performs well indoor and outdoor

Taste/Smell:

Exotic, sweet, tropical, with a floral tropical smell with a fruity under tone

Mother:

Hawaiian Haze Plum

Father:

Berkeley Blues

Background

The Haze Plum came from Dead Guy (my best friends', sisters husband who died while hang gliding)

**Medical Information**

A great anytime of the day medication, it's not too strong, it won't put you to sleep but it will not make you wired with energy either. It has a very strong sweet flavor and helps with nausea, which make it good for after chemo. Effects will last 4-5 hours. It is very good for breaking up mucus and cleaning out lungs.

SGG-Or Pinot Noir

## Oregon Pinot Noir 2008

Strain Name: Oregon Pinot Noir  
Description: Fast, Fruity, Vine Like Grape acclimated for the North West.  
Category: Sativa  
Days of Flowering: 38  
Yield: 5-7 ounces indoor, 8-10 pounds outdoor  
Potency (THC): 28%  
Mature Height: 3-6 feet indoor, 8-10 ft outdoor, takes up a lot of space  
Type of high: Gives you energy at first and then turns into a relaxing sleepy high  
Plant Type: Very vine like and bendable will take over your space  
Indoor/Outdoor: Does great with both  
Taste/Smell: Grape flavor with a skunk smell  
Mother: Hawaiian Purple Kush  
Father: Pit Bull

### Background Information:

**Mother:** Hawaiian Purple Kush Classic clone from the Islands

**Composition:** Mother: Panama Red; Father: Columbian Gold 1972

**Geographical Origin:** Hawaii

**Father:** Pit Bull

**Composition:** Mother P-91; Father Sugar Plum

**Geographical Origin:** Oregon, 2004.

Pure Hawaiian Purple Kush mixed with Pit Bull. Get that full on grape taste and huge bush growth in much less time. More crystal and a slight bit more skunk. Now grow that favorite blast from the past in a much shorter time. Acclimated for the North West. Huge producer. Grows extremely well outdoors. Pure Grape.

## Stoney Girl Gardens

Born on our award winning Pinot Noir vineyard in Willamette Valley, this was razed outdoors alongside our grapes. This is our biggest production plant. It will produce over 5 ounces indoors.

### Made In Oregon

Performs well Indoors and Out in Soil. P1 Parents and original genetics work was done outdoors in our vineyard, alongside our award winning Pinot Noir grapes.

Outdoors it is very durable and bred for a fast finish for the early Northern Oregon rainy seasons. This strain is acclimated for the North West. The plant is exceptionally fast for a sativa.

Grows into a giant bushy, sprawling plant. It grows as a creeper, able to bend and stretches like a vine. Able to stand on its own and grows abundant arms. Every branch throws many colas. Branches a lot with long creeping vine like branches. Nodes are close. Colas are abundant.

Bright white long haired, long bud, typical for Hawaiian, but jumps right into action in a week. Full on tropical grape color and flavor finish. Extreme producer. All our strains are bred for speed while maintaining traits and improving quality. Oregon Pinot Noir has a lot of lovely purple tones and a spider-plant form that is ideal for raised beds or container gardening

Here is another area that the OPN excels. It is very fast, with the Berkeley genes to take it to finish in a quick 42 days of blooming. We grow our entire cycle from start to finish in 9 weeks indoors. We loved the Hawaiian's flavor and structure, but in our climate it was difficult to harvest because we get rains and fog in early October. Purples are beautiful, but they generally need a minimum of 8 weeks of flower to begin to ripen and we just don't have that much growing season. Crossing the Pit Bull on the Hawaiian cut 2 weeks off of that and acclimatized it to our cooler climate. It takes an average of about 6 weeks here in the North West.

38 days average. Indoors OPN finishes at about 38 days. I would not keep her in bloom more than about 45 days.

OPN is an amazingly versatile plant. We have had 15 foot tall plants growing outdoors. Indoors in our mix it usually goes into the bloom room at about 4 to 5 feet tall (after 4 weeks) and comes out about 6 to 7 feet. This plant is perfect for shaping to low profiles, blending in with surrounding scenery or growing on lattice. The Tropical Grape of Cannabis, every good summer home should have a deck covered with this.

This is our biggest producer. We easily get between 4-5 ounces per plant indoors using our all organic methods. Outdoors we have seen a several pound average. She is designed for the outdoors. She is not really intended for indoors,

## Stoney Girl Gardens

but yielded well nonetheless. She'll throw several pounds outdoors in a large container or raised bed.

A couple of patients have reported aphrodisiac effects from OPN.

The flavor has complex grape tones of the classic Hawaiian that blend well with the Pit Bull undertone. It is very full and rich. The aroma is distinctly grape and tropical

As this plant moves through its growth phases to ripeness, what does it look like?

The buds start out mostly all hair and develop into dense purple golf-balls running up the stems. Stems start with a faint purple tint that increases as the plant ages to a deep purple.

The leaves are thin and bright green at the beginning and fade to purple as the plant develops. The stem of each leaf is dark purple from the beginning. Average of 9 leaflets on each leaf.

OPN is not a Christmas tree. More like a Spider plant. Ideal for SCROG. This plant is wider than it is tall, with bottom branches that hang low.

OPN is at first awakening, then sleepy, down high. Has a creeper effect, and has some legs: you feel it for a while after smoking.

Perfect for winding down after work. I liked it for heavy garden work though, because it had legs and I didn't have to keep stopping to smoke. Not really for wake-n-bake.

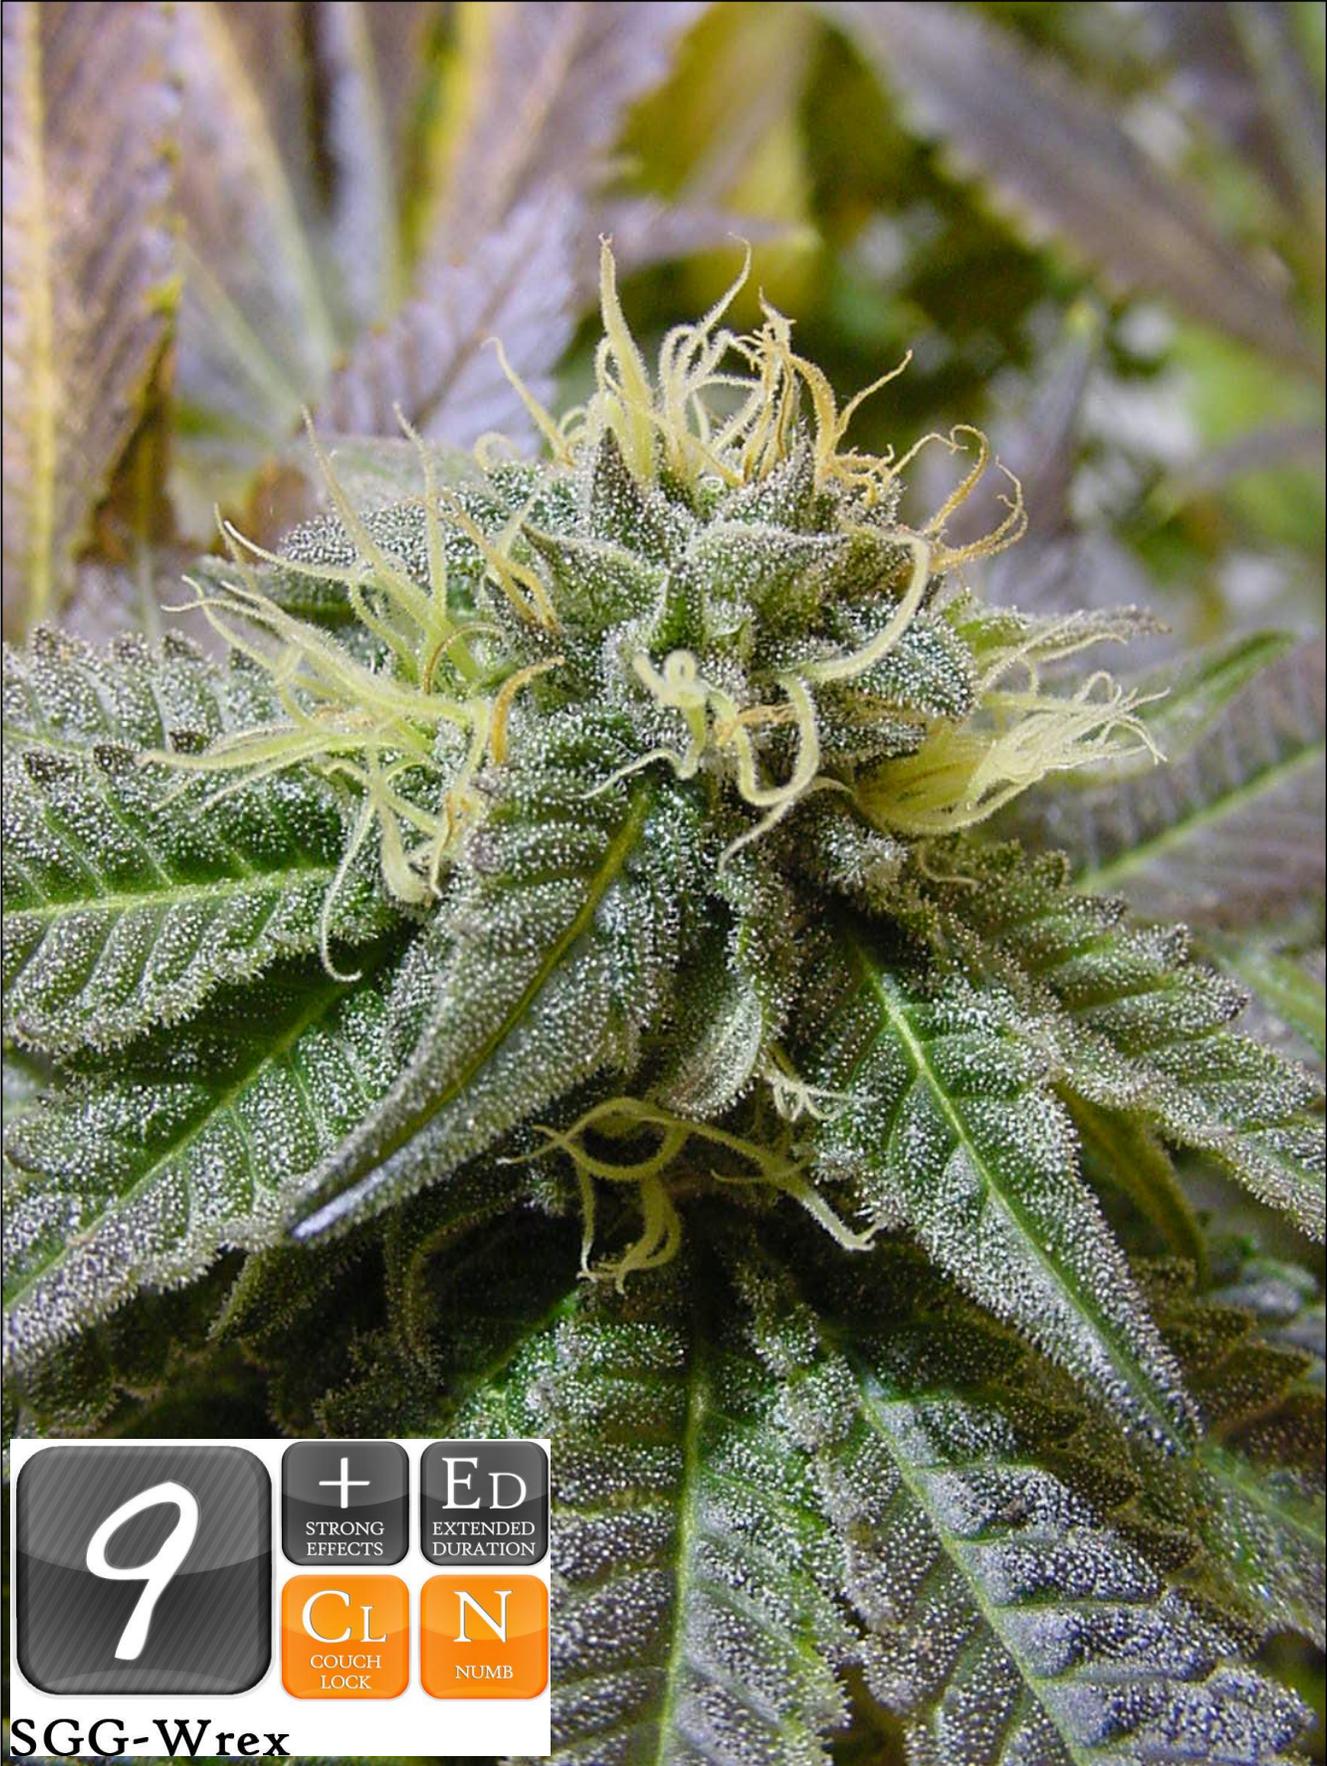

**Medical Information**

This is a strong medication for back pain. It has a great grape flavor and works on nausea, so it's good for after Chemo. This medication has a weird type of high; it has a creeper long lasting effect.

## Wrex 2008

|                    |  |
|--------------------|--|
| Strain Name:       | Wrex   |
| Description:       | Very Heavy and Oily. Huge, waxy green Leaves. Grows aggressively |
| Category:          | Indica   |
| Days of Flowering: | 38   |
| Yield:             | 3-5 ounces indoor, 6 lbs outdoor                                 |
| Potency (THC):     | 28%  |
| Mature Height:     | 3-6 feet indoor, 9 ft outdoor                                    |
| Type of high:      | Downer, great for bed time                                       |
| Indoor/outdoor:    | Does well with both  |
| Plant Type:        | Bushy with heavy dense buds                                      |
| Taste/Smell:       | Grapefruit and cat piss  |
| Mother:            | P-91   |
| Father:            | Pit Bull   |

### Background Information:

Wrex is named after one of our patients.

We crossed Pit Bull back on her mother to preserve the P-91 genes, and called the result Wrex, after the patient in our garden who prefers it to any other for severe pain control.

Look out for this potent puppy. This is one of our strongest, mixed for extreme or terminal patients Cross of Pit back on P-91. Produces well, stores well, New for 2008, Good red color pistols outdoors and finishes fast.

**SGG-Pit Bull**

## Pit Bull 2003 Potent, Euphoric, Skunk

|                    |  |
|--------------------|--|
| Strain Name:       | Pit Bull   |
| Description:       | Describing flavor and aroma are most difficult. It is like none other, and in a category all of its own. We have asked many to help us to use just a few words: Exotic, Deep, Rich, Unique, Tropical, Distinctive, Fruity, Skunky, Complex and Intense. Although each of our breeds is completely different, this one stands out as the most unique. Currently our most popular and sought after strain. So strong it makes skunk and undertone, this is one of our favorites. |
| Category:          | Indica dominant 80/20  |
| Days of Flowering: | 35-42  |
| Yield:             | 3-6 oz Indoor, 10 pounds outdoor   |
| Potency (THC):     | 36%  |
| Mature Height:     | 3-6ft indoor, 10-15ft outdoor  |
| Type of high:      | Euphoric, intense, immediate.  |
| Plant Type:        | Buds throw long bright pom-pom like hairs.   |
| Indoor/outdoor:    | Does well in both conditions   |
| Taste/Smell:       | Taste is fruity and earthy mix with a tropical bottom note   |
| Mother:            | P-91   |
| Father:            | Sugar Plum   |

### Background Information:

Pit Bull was named for my dog, Arianna. After winning first place at the OMCA, I decided to do a round of breeding with Sugarplum. I put it on the P-91 because I detested the flavor of the Hog's Breath, but it was the most powerful medicine I was producing. The goal was to get something strong that tasted pleasant, and Pit Bull was a much bigger success than I ever anticipated. It has circled the globe and is grown in India, Thailand, Amsterdam and Pakistan.

Acclimated for the North West. Good Indoor and Outdoor. Easy to grow. Very, very Potent. Good for Migraines, and most conditions across the board.

Tested by Ed Rosenthal, this will be featured in the Big Book of Buds 4 in 2010 as a center fold.

Pit Bull Mother: P-91

Composition: P-91 Mother: G-13; P-91 Father: Bull Rider

Geographical Origin: Southern California

Pit Bull Father: Sugar Plum, First Place Oregon Medical Cannabis Awards 2003

Composition: Mother of Sugar Plum: Hawaiian Haze Plum; Father of Sugar Plum: Berkeley Blues (Berkeley and DJ Shorts Blueberry)

Geographical Origin: Both the Haze Plum and the Berkeley Blues were created in Oregon by

## Stoney Girl Gardens

Oregon breeders.

Performs well in any environment, Indoors and Out, Soil and Hydro. Regardless of the technique used, Pit Bull is a sure winner. We have tested this not only using different growing mediums, but also different methods such as SOG, SCROG, and Hydro's with great success in all areas. The Pit Bull is mite resistant, easy to clone and easy to grow. It is very vigorous and grows fast. It is very durable and bred for a fast finish for the early Oregon rainy season. This strain is acclimated for the North West.

Grows into a giant sphere, a bushy ball of buds.

Extremely fast and caked with crystals.

We always grow strictly Organic, but Pit Bull performs really well in any circumstance.

Here is another area that the Pit Bull excels. It is very fast, with the Berkeley genes to take it to finish in a quick 35 days of blooming. We grow our entire cycle from start to finish in 9 weeks indoors.

Pit Bull is an amazingly versatile plant. We have had reports of 16 foot tall Pit Bull plants growing outdoors in Oregon, CA, Arizona and India. We have heard of large producing closet gardens with Pit Bull in a hydro set-up. We have seen massive Pit Bull buds from a hydro grow.

In our mix it usually goes into the bloom room at about 4 to 5 feet tall and comes out about 6 feet. We easily get between 4-5 ounces per plant using our all organic methods. We have seen a production of 55 ounces using SCROG indoors.

Indoors we get an average of 5 ounces using our methods. Our friends use the SCROG method and get 55 ounces per plant on an indoor grow. Outdoors we have seen as much as 5 pounds average.

Pit bull is aggressive right off the bat. She begins bushing and throwing leaves in the first 2 weeks of life. There is no reason to shape or top the plant as it has perfect form every time. From the beginning, the plant emits a strong odor of Pit. The plant is easy to clone, easy to grow, mite resistant and very forgiving.

Pit Bull jumps right into action with open blooms that are covered with crystals within the first 2 weeks. The buds are round, large, thick balls of oozing crystals. You will not want to stop smoking this as the taste is as good at the end of the joint as it was the first hit. Look out though; this one produces an above average amount of THC. Usually one hit is all your guest should be allowed to have. Anymore and you might as well plan a full evening.

Large spheres of medium density, somewhat open and low centered. Not airy or popcorn textured, but not rock hard. Presents a large profile. The sugar leaves have so much crystal on them that they tend to curl. The fan leaves are large and wide and look like maple leaves. She stays a bright green unless it gets chilly in the garden, then she turns a lovely purple. The average leaf has 7 long full featured fingers. The bases of the leaves are a passion purple. The branches are bright green with violet stripes highlighting the ribs. It is a bush indoors and a giant tower out.

Tastes and smells like nothing you have ever come across. It has a unique, unforgettable,

## Stoney Girl Gardens

tropical, skunky, fruity, and pungent. Forget using a grinder, this stuff is way too sticky to handle like that.

Pit Bull is very pliable. You can grow that tall fir tree or spread it out over 12 feet of cage in a SCROG on top of a bench. Pit Bull is very forgiving, make a mistake and she truly has the survival instinct to fight on and come back better than ever.

Resilient is the word. Easy is work. Pit Bull is mite resistant and tough, with no special handling required. Pit Bull is very hearty and will produce outstanding medicine even with the most adverse conditions. She is ideal for beginners and the Connoisseurs will treasure her. This is a Must Have for any garden.

In two different independent lab tests here in Portland Pit Bull that was grown using our methods tested between 33 and 36% THC when harvested at peak floral periods (40% hair coloration, not amber tri-combs). 38% is incorrect and we will change that to the correct 36%. Method of growing does have an effect. Other growers have tested their pit bull with only 28% THC (this testing was done by Harbor in SF). They did not harvest at peak floral periods and they let the plant go longer than recommended. This lowers THC as it is turned into CBD and CBN. They also did not use our medium (sunny girl mix) or methods.

This is one of the most popular medical strains in the North West. It has wide range of soothing treatments for many conditions. This strain is listed as Neuropathic Pain and Depression medication by Oregon Green Free ([www.oregongreenfree.com](http://www.oregongreenfree.com)). We have testimonies from patients that they have used the Pit to wean themselves away from strong pharmaceuticals. From Migraines to MS; from Pain to Cerebral conditions, she attacks them all. It has been a solid winner in all circles without ever having been in our competitions. We have reserved this honor for this book and for Amsterdam.

Stupefying and Euphoric, you will lose track of everything. Only the serious and most experienced should attempt this puppy. Not for the amateur. For extreme medical conditions only. Danger: Do not drive or operate equipment while using this strain.

## Black Moon

|                    |   |
|--------------------|---|
| Strain Name:       | Black Moon  |
| Description:       | This plant grows green but buds grow completely indigo from beginning to end with blonde hairs. Very photogenic. Mellow smoke with terrible cottonmouth, munchies finish. |
| Category:          | Mix   |
| Days of Flowering: | 38  |
| Yield:             | 3-5 ounces indoor, 7 pounds outdoor   |
| Potency (THC):     | 28%   |
| Mature Height:     | 5 feet indoor, 12 ft outdoor  |
| Type of high:      | Head and body. Mellow, Relaxing   |
| Plant Type:        | Narrow tree, like a cedar tree  |
| Indoor/outdoor:    | Does well in both, better outside   |
| Taste/Smell:       | Honey suckle flavor, light floral smell   |
| Mother:            | Pit Bull  |
| Father:            | Pit Bull  |

### Background Information:

This is a special preview for Bud Bookers of a project in the works. We plan a release this year.

Pure Pit Bull Genetics, this is a demonstration of what you can accomplish with genetic engineering. We have harnessed and locked the maximum color purple from Pit Bull and are preparing to cross it over to the Whippet to give it a complete crystal encrusted frost across the leaves and to tighten up the buds.

This is a great example of capturing a phenotype from a single strain.

**Medical Information**

This medication is good for stimulation of your appétit. It also helps with severe PTSD. It is very stimulating for the mind and helps with limiting flashbacks.

## **Blue Bull** New for 2012

**Pit Bull and Berkeley Blues**

|                    |  |
|--------------------|--|
| Strain Name:       | Blue Bull  |
| Description:       | Large Plant with open, airy form and deep blue flowers. In bloom, the leaves go from green to yellow to reddish blue in about 3-4 weeks.<br>Sickeningly Sweet the favorite of Seattle. This plant grows crazy and beautiful with a full bouquet of blue fruit. |
| Category:          | Mostly sativa  |
| Days of Flowering: | 35-42  |
| Yield:             | 4-6 ounces indoor, 4 pounds outdoor  |
| Potency (THC):     | Very strong  |
| Mature Height:     | 5 feet indoor, 15-20 ft outdoor  |
| Type of High:      | Speedy but intense. Great for starting your day.   |
| Plant Type:        | Large, huge round bush   |
| Indoor/Outdoor:    | Does well in both  |
| Taste/Smell:       | Fresh Blueberry muffins  |
| Mother:            | Berkeley Blues   |
| Father:            | Pit Bull   |

Background Information:

**Medical Information**

This medication is good for anxiety at any level. It is a medium high. This is also good for nausea especially after chemo. This is more of a morning type of medication because it will not make you tired.

## Odysseus

Strain Name: Odysseus

Description: This plant grows great, it's a big classic purple with juicy lime green buds. It is a very bushy plant and grows wonderful indoors and out. It is a good daytime medication because it gives you an energy boost. This strain is also very flavorful and gives off a great aroma.

Category: Sativa Blend

Days of Flowering: 35

Yield: 5-6 ounces indoor, 5-8 lbs outdoor

Potency (THC): unknown

Mature Height: 6 feet indoor, 12 to 15 feet outdoor

Type of High: Energizing

Plant Type: Bushy

Indoor/Outdoor: Does well on both

Taste/Smell: Nice grape flavor and smell

Mother: OPN

Father: Pit bull

Background Information:

Odysseus is named after our grandson. He was born in February, 2011. The seeds were first created in Winter of 2010 and released for testing in spring of 2010. It is exactly what we expected and planned. The exciting thing about working with SG Genetics is the ease of forecasting success in our breeding projects due to using our IBL line of seeds.

**Medical Information:**

This medication is good for pain and any kind of cancer. It helps with nausea, especially good after chemo. This is a good daytime strain, it doesn't make you sleepy. This can help with many different issues.

## Cassius

Strain Name: Cassius

Description: This taste like apple jacks. It is very sweet and fruity. It grows very well indoors and out. It is a very big plant and grows like a bush. This is a very strong strain.

Category: 60/40 Sativa

Days of Flowering: 38

Yield: 5-8 oz indoor; 3-4lb outdoor

Potency (THC): 26%

Mature Height: 8 to 10 feet outdoor, 4 Feet indoor

Type of High: Daytime with a kick for the head and pain

Plant Type: Bush

Indoor/Outdoor: Does well in both

Taste/Smell: smells like Apple jack, and taste like apples with a hint of cinnamon.

Mother: Haze Plum

Father: Crippit

### **Background Information:**

This stain was named after my eldest grandson, this strain is refreshing yet potent. A must have for the connoisseur collection.

**Medical Information:**

This one is good for depression and has a great flavor so it's great for nausea , especially after chemo. It works well as an appetite stimulant.

## Marion Berry

Strain Name: Marion Berry

Description: When you see this strain the only thing that comes to mind is wow. It is a pure vibrant purple. It has a strong great distinctive blackberry aroma. It grows very well indoor and outdoor. It's a perfect bush with big huge maple looking leaves. The smell and flavor blend all together in a beautiful, berry rich tasting bud that will make you drool.

Category: Indicia dominate

Days of Flowering: 35 days indoor

Yield: Indoor 5 to 9 oz, outdoor 5 to 10 lb

Potency (THC): Unknown

Mature Height: Indoor 5 to 6 feet, Outdoor 10 to 12 feet

Type of High: Intense, head rush, and dreamy. (Still being tested)

Plant Type: Perfect bush, like a candelabra

Indoor/Outdoor: Finishes first outdoor but does well indoor.

Taste/Smell: very fruity taste, with a strong blackberry smell.

Mother: Washington Blackberry

Father: Blue Bull

### Background Information:

Named after the famous Marion Berry that grows in Marion County, Oregon. (No this is not about the Mayor)

We were honored to get an original copy of Black Berry from a mountain grower on the Far East side of Mt. Rainier in Washington. This strain was very colorful and had a taste you can't forget. To extend the length (makes the high last 4-5 hours), potency and to reduce the finishing time of this strain we crossed it with Blue Bull. Blue Bull allowed us to preserve the coloration and improve the taste and high of the original Black Berry (not to be confused with the ever popular Blackberry Kush as there is no Kush in this edition).

## Stoney Girl Gardens

Begins with a full on Black Berry flavor and ends with a sweet Blueberry Cobbler finish. An absolute must have and one of our most demanded strains.

It is one of the most beautiful plants we have grown with a taste to match. We expect to win every competition it is entered into and expect this one to be a big smash hit on the market.

## Licensing

Stoney Girl has several versions of licensing, from End User Agreements to Production and Development Licensing.

### Why License?

Stoney Girl Gardens is interested in providing only top quality, guaranteed safe products to this new industry. In a time when it is difficult to know who you're dealing with or where your medicine comes from, it's good to know that Stoney Girl Gardens is there. Stoney Girl stands for Premium Quality, Medical Marijuana products designed for the Medical Patient that is Safe and Effective.

To insure this level of quality Stoney Girl Gardens is offering [Verification](#) through Licensing of our Associates and Partners. We are constantly battling fraud with our product name.

### Verification

All Stoney Girl products and services are only available through Authorized Associates. We verify all of our suppliers, vendors, seeds and products to be original. This service allows you to quickly check and verify with us that you're getting the original Stoney Girl product. Beware of Fraud!

Verification Hot Line 503-788-2349

### Fraud Alert

## Licensing Information

### End User License Agreement

Private Use of our Seeds and Genetics - End User Licenses are on each package of our seeds. Remember, we do not sell seeds, we sell licensing. To find out the entire agreement for using our seeds [Read Here](#).

### Production License

Production licenses come in three types; grow seeds for us, start your own product production company or clone factory. Select one of the three from below.

Nursery License- Make your clone factory. Find out how to make Authorized Stoney Girl Clones

## Welcome to Stoney Girl Gardens Seed Company USA.

Our seeds are all created and selected by hand. We use only strict organic methods of breeding to accomplish our goals. All our seeds are IBL (In Bred Line) which means you're using top quality breeder seeds. We use the same seeds we give you in our own breeding projects. Now you have quality tools to breed your own, or confidence that you know what you're getting when you plant.

Feminization - We do not believe in feminization of seed stock. First, once you use feminization you are caught in a loop of always having to reverse sex to get a male. We use natural males selected from the Parent seed stock. This gives us a high gene frequency and means every plant is alike in quality and gene structure. Second, improper feminization causes hermaphrodites or seeds in your garden.

Our seeds are not feminized, however due to our natural process of thorough breeding techniques we have very few males. In some locations we offer a bounty on males; that is we will trade you a female plant for your male. We will then assess the male for use in our own breeding programs. Seeds usually have a 90 percent rate of females or better.
